

WHAT IS FIRESEAL MOBILE?

Fireseal Mobile is an innovative web-based IT system that gives the client and design team real-time visibility of on-site firestopping production and costs whilst providing an online photographic database of all installations.

HOW DOES IT WORK?

1

Fireseal Operative installs
Firestopping on site

2

Fireseal Operative inputs installation
information (location, size, photographs
etc) onto Fireseal Mobile App

3

Fireseal Mobile App sends data
in real-time to cloud based server
where it is priced and recorded

4

Both Client and Fireseal can log
onto the Fireseal Mobile website
to monitor productivity and costs

5

Upon Completion worksheets, photographs,
data sheets and certification delivered to
client on a Fireseal USB Flash Key

BENEFITS TO CLIENT

- All installations photographed and labelled. This information is then stored electronically on a cloud server which the client can log onto at any time.
- Client can see production and cost data in real time – providing crucial information for building and budget programmes.
- Client does not have to spend hours reviewing 100's of handwritten worksheets at the end of a project – everything can be exported to Microsoft Excel for easy review.
- All installations have GPS tags for ease of reference
- Upon completion the project Firestopping O & M file will be presented to client on USB stick for easy storage.

BUILDING CONTROL (AMENDMENT) REGULATIONS 2013

The implementation of the Building Control (Amendment) Regulations 2013 on the 1st March 2014 will create a significantly more onerous environment for main contractors, design teams and sub-contractors alike. Fireseal Mobile will give main contractors and the design teams the peace of mind that their building has been firestopped correctly thereby protecting all parties concerned from claims to the contrary in the future.
